Dr. Nathan Stall, Geriatrician, Sinai Health System
- SUPPORTING RABBIS:** Rabbi Baruch Frydman-Kohl, Rabbi Chaim Strauchler, Rabbi Steve Wernick

Memory changes can be a normal part of aging, however, progressive cognitive changes that impact functioning may be a sign of dementia. Uncertainty and fear about memory loss can lead to isolation and stigma. These concerns affect individuals, families and communities.

Please join us to discuss the aging brain, dementia care and caregiver support.

*Patient and family support organizations will be available at booths in the foyer, shortly before and after the program.
